

CASE STUDY: BW on HANA Upgrade and Migration Journey

INDUSTRY:

Manufacturing

CHALLENGES:

The customer's SAP user community faced a variety of challenges when working with SAP's Business Warehouse system and the corresponding Business Objects and Microsoft PowerBI reporting solutions. This included:

- Untimely data availability due to prolonged data extraction and transformation affecting business performance.
- Report performance degradation as data volume increased as more entities went live on SAP ECC and BW.
- Challenges with month end reporting and the need for more real time reporting.

SOLUTION:

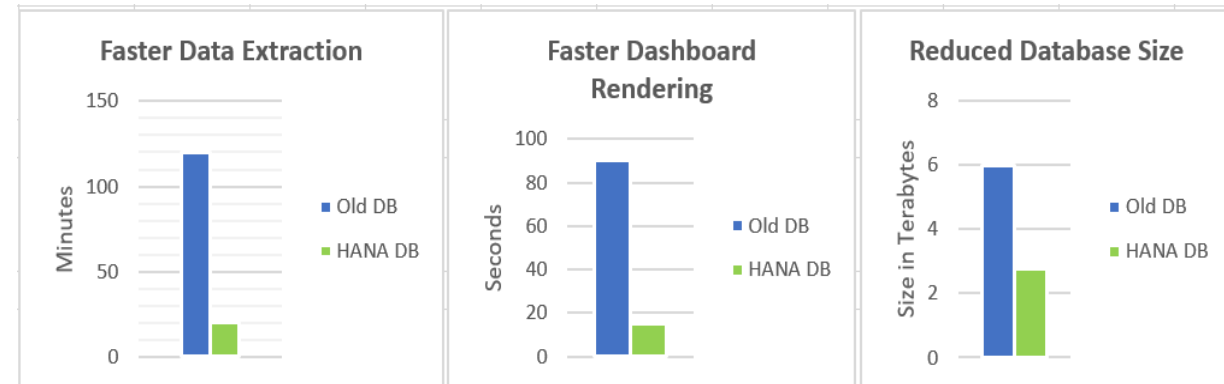

SAP BW 7.4 powered by SAP HANA 2.0

RESULTS:

Four months of dedicated IT and business efforts to resolve technical issues, testing, validation, and performance analysis paid off when the client realized the following:

- Performance improvement in all areas of the business.
- Data Extraction and Transformation timeframe reduced resulting in speeding up the month end process.
- Increased user adoption in the Finance and Manufacturing areas due to improved report performance.
- Business Objects and PowerBI Dashboard could be rendered much quicker enhancing the user experience.

IMPROVEMENTS REALIZED:
